Filter lasts up to 90 days

Antimicrobial Product Protection™
Antimicrobial ingredients built-in for improved filter
life and performance²

MADE
IN USA

DuPont is committed to helping you thrive by
providing essential innovations that make a
difference in your everyday life.

Why Antimicrobial Product Protection?

Microscopic airborne organisms are often trapped in high performance filters – left untreated they could multiply on unprotected surfaces. The presence of antimicrobial product protection in the filter material is specifically designed to help reduce the uncontrolled growth of odor causing microbes on the surface of the filter. The antimicrobial in this filter has not been tested to reduce airborne microorganisms.

How Often Should I Change My Filter?

DuPont™ high performance air filters are designed to last up to 90 days within ordinary household conditions. However, the life of the filter can vary depending upon individual conditions in your home. This is why you should check your filter every 30 days. Using a filter after it has expired may restrict air flow which can impact efficiency of your system and/or damage the system's air handler.

Limited Warranty: This product will be free from defects in material and manufacture for a period of one year from date of purchase. If this product is defective, your remedy shall be replacement of the product or refund of the purchase price at PPA Industries Inc., (PPA) option. For warranty service, contact PPA at the address listed on this package.

Limitation of Liability: PPA Industries Inc. will not be liable for any loss or damage arising from the use or misuse of this product whether direct, indirect, special, incidental, or consequential.

Manufactured and distributed by: PPA Industries Inc., 420 3rd Avenue NW, Hickory NC 28601

In case of emergency, damage, or need of repair, please contact PPA Industries at 1-888-808-9100 or visit us at our website: www.protectplusair.com.

All MERV data and statements are indicative of typical properties and characteristics obtainable. MERV claims are to be used as a guide for general comparison and not as a specification.

The Science of DuPont™ Air Filters

This DuPont™ Air Filter traps up to 85% of larger airborne particles such as dust, dirt, and pollen. For every visible particle trapped in your filter there are as many as 100 more that you cannot see which can seep into HVAC system and eventually into your air. DuPont™ Air Filters use state-of-the-air science to enhance performance and trap more microparticles.

Replacing Your Filter

Restricted air flow from a clogged filter can impact efficiency or damage your system. Check your filter throughout its filter life.

1. Always turn off system or fan before replacing the filter.
2. Carefully remove plastic and/or label from the new filter.

WARNING: TO AVOID DANGER OF SUFFOCATION, KEEP THIS FILM AWAY FROM BABIES AND CHILDREN.

3. Be sure air flow arrow on filter frame matches direction of air flow (toward system).
4. Record installation date on the designated space.

* With all air filter purchases, be sure to refer to your heating/cooling system Owner's Manual to ensure the filter you are about to use is compatible with your system.
