ALLERGEN 8000 PERFORMANCE AIR FILTER MERV 8

Improving Indoor Air Quality While Optimizing HVAC Performance

PURAFILTER 2000 Performance filters are designed to last up to 90 days. However, local air quality surrounding your home and the environment within your home can significantly alter the useful life of your filter. Pets, painting, construction projects, etc. within the home reduce filter life. We recommend checking your filter every 30 days during moderate to heavy use of your HVAC system. Replace filters before they become completely covered with dust. This will prevent harmful back pressure on your HVAC system. Changing filters more frequently can also help to reduce energy costs.

Installation Instructions:

CAUTION: Turn furnace fan off before installing filter.

- Carefully remove and dispose of your old furnace filter by placing particle filled filter in a plastic bag so as not to reintroduce particles into your air.
- Remove plastic wrap and/or paper insert from filter. Insert filter so the arrow on the side of the frame matches the direction of the air flow.
- Record the installation date and replacement date on the designated space on the filter frame.

Purafilter 2000® Filters Outperform Typical Fiberglass Filters

Filters of this type are not intended to remove significant quantities of tobacco smoke.

***Always check your HVAC equipment manual to ensure this filter is compatible with your system.**
